

New for the Trimble Guidance Solution:

Announcing the Trimble EZ-Pilot Assisted Steering System

Trimble Agriculture is excited to announce the new Trimble EZ-Pilot™ assisted steering system. EZ-Pilot is an affordable, high-performance steering system that turns the vehicle steering wheel using a sleek and compact electric motor drive that is integrated into the steering column. The compact motor design provides clear access to the vehicle's controls and instrument panel. EZ-Pilot is unique to other systems because its integration maintains the use of the vehicle's original steering wheel and telescoping functions. Trimble is pleased to announce the WM-Drain™ farm drainage solution, a complete toolset that streamlines the survey, design, installation, and mapping steps of surface and subsurface drainage. The WM-Drain farm drainage solution ensures optimal 3D drain placement, which improves crop yields by controlling ponding, optimizing root depth, maximizing planting seasons, and minimizing nutrient loss. Trimble Agriculture is excited to announce the new Trimble EZ-Pilot™ assisted steering system. EZ- Pilot

Features

- **T3™ enhanced terrain compensation technology** immediately adjusts the vehicle steering to compensate for rough terrain or slopes and hillsides.
- **Sleek motor design** is integrated into the steering column and provides clear access to the instrument panel and other vehicle controls.
- **High-torque electric motor** provides for better steering of vehicles with more rigid power steering systems.
- **Fast-reacting electric motor** enables the system to quickly make steering adjustments to keep the vehicle online and keep it there.

Flexible installation options give the user a choice of using the vehicle's original steering wheel or installing the optional steering wheel, which provides an offset that returns the wheel back to the original height.
